Prevent Daily lip balm for the prevention of cold sores

SoreFix Prevent cold sore lip balm can be used daily to prevent an outbreak when running a greater risk of reactivating the cold sore (herpes simplex) virus. The balm is intended to form a physical barrier that protects the lips against cold sore triggers (see cold sore triggers in figure in "All phases technology"). SoreFix Prevent contains sun protection filter (SPF 30) for optimal protection of the lips and to prevent cold sore relapses triggered by UV-light. The cold sore lip balm improves the condition of the lips.

Dosage and use:

To prevent a cold sore, apply SoreFix Prevent cold sore lip balm 3-6 times a day on the entire lips when exposed to triggers (see figure in "All phases technology"). It is advised to wash hands before and after application. When using lipstick, apply SoreFix Prevent cold sore lip balm at least 15 minutes in advance.

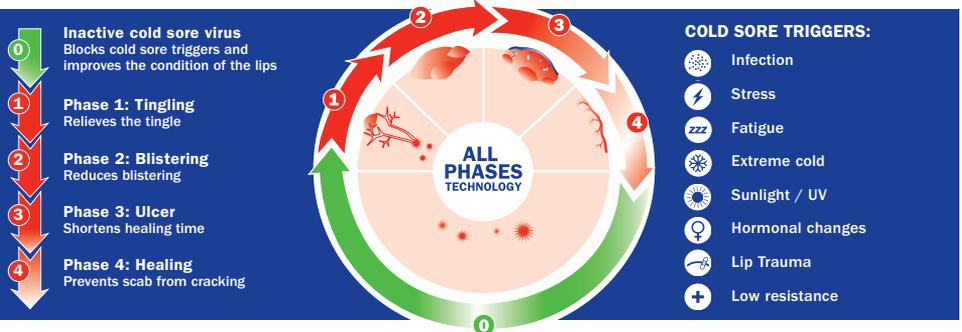

SoreFix Prevent cold sore lip balm is free of sulphates, free of polyethylene glycols, TEA's, DEA's, parabens and other preservatives.

Precautions for use:

- Only suitable for external use on and around the lips.
- Do not use if allergic or oversensitive to one or more of the ingredients. Stop the use immediately when irritation or an allergic reaction occurs. Contact a health care professional if symptoms persist.
- When pregnant or breastfeeding, only use if instructed by, and under supervision of, a health care professional.
- Suitable for adults and children of 4 years and older.
- It is recommended to pause usage for 2 days after 30 days of continuous use.

If a serious incident has occurred in relation to the product, report to the manufacturer mentioned on the leaflet and the competent authority in your country.

WHAT DOES SOREFIX DO IN EVERY PHASE OF A COLD SORE?
