Cream for the treatment of cold sores in all 4 phases

4 in 1

SoreFix Rescue cold sore cream is a unique solution with proven efficacy in all 4 phases of a cold sore. SoreFix Rescue cold sore cream is intended to form a protective moisture barrier to hydrate and protect the lips from external environmental factors and relieves the tingle (itch), reduces blisters, shortens healing time and prevents the scab from cracking (see figure "All phases technology"). SoreFix Rescue cold sore cream contains a sun protection factor (SPF 30) and is a transparent cream which will not accentuate the cold sore.

Dosage and use:

For optimal results during treatment, apply the cream 3-6 times a day to the affected area on the lips to avoid spreading of the cold sore. SoreFix Rescue cold sore cream can be safely used during the whole cold sore outbreak, from the initial tingle till the scab has fallen off and the cold sore is completely healed. It is advised to always wash your hands before and after application to prevent contamination. When using lipstick, apply SoreFix Rescue at least 15 minutes in advance.

The cream is free of sulphates, free of polyethylene glycols, TEA's, DEA's, parabens and other preservatives.

If a serious incident has occurred in relation to the product, report to the manufacturer mentioned on the leaflet and the competent authority in your country.

Precautions for use:

- A cold sore is very contagious. Be extra careful when in physical contact with babies and small children.
- Use cold sore cream only on yourself to prevent infection of others.
- Only suitable for external use on and around the lips.
- Do not use when allergic or oversensitive to one or more of the ingredients. Stop use immediately when irritation or an allergic reaction occurs. Contact a health care professional if symptoms persist.
- When pregnant or breastfeeding, only use if instructed by, and under supervision of, a healthcare professional.
- Suitable for adults and children of 4 years and older.
- Contact a healthcare professional if the cold sore has not improved after 2 weeks and stop using the product.

Note:

To optimise usage comfort, the tube is larger than the actual content. The tube contains 6 ml of the cream. When using for the first time, carefully squeeze possible excessive air out of the tube.

WHAT DOES SOREFIX DO IN EVERY PHASE OF A COLD SORE?

- 0 Inactive cold sore virus
Blocks cold sore triggers and improves the condition of the lips
- 1 Phase 1: Tingling
